	Two Or More Children Only	13	\$ 16.22

Key:

Rx Plan = Non Medicare retirees and dependents enrolled in Express Scripts

MRx Plan = Medicare retirees and dependents enrolled in Express Scripts

How To Determine Your Prescription Cost

To determine your prescription drug cost in the City's prescription drug plan, read the following categories along with the costs displayed on the front of this notice and complete the worksheet below.

- Refer to **Table A** if you and all of your family members are Non Medicare. **Example:** Your family unit includes you and two dependents (spouse and child) all members are (**Non Medicare – Table A – Rx Level Tier 4 – Family**). Your Rx cost for you and your family members will be \$27.50. Your total prescription drug cost of \$27.50 will be combined with your medical cost as a single payroll deduction from your biweekly pension check.
- Refer to **Table B** if you and all of your family members (dependents) are Medicare eligible enrolled in Medicare Parts A and/or B. **Example:** Your family unit includes you and your spouse/domestic partner (**Both Medicare Eligible – Table B – MRx Tier 22 – Two Members enrolled in MRx**). Your MRx cost will be \$23.98 for both of you. Your total prescription drug cost of \$23.98 will be combined with your medical cost as a single payroll deduction from your biweekly pension check.
- Refer to **Tables A and B** if your family has a combination of Non Medicare and Medicare members. You will have to add the cost of Rx and MRx level tiers from both Tables A & B to arrive at your total prescription drug cost that will be combined with your medical cost as a single payroll deduction from your biweekly pension check. **Example:** Your family unit includes you (**Non Medicare – Table A – Tier 1 - Individual**) and your spouse (**Medicare – Table B – Tier 21 – One Member enrolled in MRx**). Your Rx cost will be \$11.28 and your spouse's MRx cost will be \$11.99. Your total prescription drug cost of \$23.27 ($\$11.28 + \$11.99 = \23.27) will be combined with your medical cost as a single payroll deduction from your biweekly pension check.
- Refer to **Tables B & C** if you (*the retiree*) are Medicare eligible enrolled in the MRx plan and your family members (dependents) are Non Medicare enrolled in the Rx plan. You will have to add the cost of Rx and MRx level tiers from both Tables B & C to arrive at your total prescription drug cost that will be combined with your medical cost as a single payroll deduction from your biweekly pension check. **Example:** Your family unit includes you (*the retiree – Medicare – Table B – MRx Tier 21 – One Member enrolled in MRX*) and your spouse, son and daughter (*all Non Medicare – Table C – Rx Tier 11 – Spouse/Domestic Partner + Children enrolled in Rx*). Your MRx cost will be \$11.99 and your Spouse/Domestic Partner + Children's Rx cost will be \$27.50. Your total prescription drug cost of \$39.49 ($\$11.99 + 27.50 = \39.49) will be combined with your medical cost as a single payroll deduction from your biweekly pension check.

Worksheet:

- **Table A** (All Members Non Medicare): Level Tier Code: ____ Rx Cost: \$ _____
 - **Table B** (All Members w/ Medicare A and/or B): Level Tier Code: ____ MRx Cost: \$ _____
 - **Table C** (Dependents of Retirees in MRx): Level Tier Code: ____ Rx Cost: \$ _____
- Total Prescription Drug Cost Per Pension Check:** \$ _____

Note: Your total prescription drug cost will be combined with your medical cost as a single payroll deduction from your weekly pension check.
